

The possibilities

are just a phone call away

Customer Service and Support

Support is the cornerstone of O&M. When you need assistance, we offer fast and effective solutions using a wide range of communication tools that will help you continue to move forward and stay ahead. We invite you to speak with one of our experienced professionals to learn more about the benefits of our services.

Our expertise continues with sound business principles, new product development, and pre-qualified product selections. These are the responsibilities of our design and development teams. Competency testing and product awareness are the focus of our in-house training and testing processes. We stand behind our services and your investment today and tomorrow.

If it were possible

would you like to monitor or
control your facility
from anywhere in the world?

it is possible

with an easy to use interface and

Human Machine Interface (HMI) Development

Emerging HMI technologies are changing the way we interact with computer controlled systems. O&M is helping to set the standards. Our utilization of advanced computer graphic applications allows us to generate an intuitive and visually appealing HMI. This approach facilitates application integration such as interactive help, active imbedded data, multimedia enhancements, and more.

Our HMI services and capabilities include:

- Graphical User Interfaces
- Symbols & Libraries
- Enterprise, Web & Wireless Solutions
- Systems Integration
- Specifications & Standards
- Functional Requirements Documentation

Facility Management System (FMS) Solutions

At O&M, we engineer and market advanced solutions designed to optimize the operation and maintenance of your facility systems. Since inception, our engineers have introduced numerous innovative solutions to the building automation and facility management industry.

We can enhance your facility management capabilities by implementing automated applications that include evaluation of your systems, data collection, report generation, and more.

Our FMS capabilities include:

- Database Development and Deployment
- Alarm & Event Data Management / Reporting
- Trend & Historical Data Management / Reporting
- Maintenance Management
- Custom Applications

Specialized O&M Services

Today's end-users want their facility equipment managed as a single system. O&M can address your information and facility management needs by integrating your Building Automation System (BAS) and FMS data with your familiar desktop applications.

O&M will increase efficiency by evaluating and planning the current and future needs of your BAS and FMS systems. We are uniquely qualified to specify, design, and prepare documents for BAS and FMS deployment. O&M offers additional services and optimum solutions that vary by product selection and infrastructure design. They include:

- Consulting
- Survey & Analysis
- Thin-Client Solutions
- Site Installation
- Customer Training
- CAD / As-Built Drawings
