About O&M Engineering, Inc.

Incorporated in 1994, O&M Engineering, Inc. is a privately held, Baltimore-based company. O&M Engineering, Inc. was founded to address a niche market serving the diverse computer application needs of facility operation and maintenance professionals. At that time, computerized and digital process enhancements were still in their infancy in most facility operation and maintenance departments. Today, they play an integral role in effective enterprise and facility process automation, and O&M Engineering, Inc. is a firmly established, nationally recognized leader in this arena.

O&M Engineering, Inc. is managed by an experienced team of professionals who are committed to the industry and to a strategic plan that promotes controlled and sustained growth. President Richard K. Warner, PE has combined a dedicated team, industry know-how, state-of-the-art design and software development expertise, to supply clients with best-in-class products and services.

Innovative Solutions

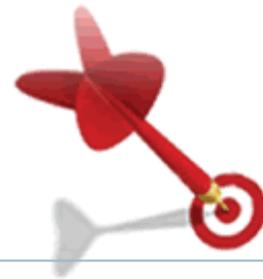

Enterprise Integration

Emerging technologies are changing the way we utilize and operate our automated facility and infrastructure systems. O&M Engineering, Inc. is helping to set the standards for future enterprise operation by employing strategic and proven technologies.

Information Intelligence

At O&M Engineering, Inc., we engineer and market advanced solutions designed to optimize the operation and maintenance of your enterprise facility systems. Since inception, our engineers have introduced numerous innovative solutions to the automation and facility management industry.

Energy Intelligence

O&M Engineering, Inc. stands prepared as a pacesetter in the design and development of real-time monitors and dashboards that enable facilities to evaluate and troubleshoot their energy usage and carbon footprint.

Security Intelligence

Facility operation and maintenance personnel must acknowledge their role in national security. At O&M Engineering, Inc., we represent and market advanced solutions designed to provide unmanned, actionable intelligence that can be easily integrated into your enterprise automation interface.

Enterprise Integration

Emerging technologies are changing the way we utilize and operate our automated facility and infrastructure systems. O&M Engineering, Inc. is helping to set the standards for future enterprise operation by employing strategic and proven technologies. Our commitment to open and interoperable solutions allows us to provide the optimum solution for the customer. Our focus on the end-user through utilization of advanced computer graphic applications allows us to generate an intuitive and visually efficient interface. This approach facilitates virtually unlimited opportunities for application integration such as content management, interactive help, active imbedded data, multimedia enhancements, and more.

- Functional Requirements Development

Information Intelligence

At O&M Engineering, Inc., we engineer and market advanced solutions designed to optimize the operation and maintenance of your enterprise facility systems. Since inception, our engineers have introduced numerous innovative solutions to the automation and facility management industry. We can enhance your decision making and mean time to solution capabilities by implementing information processing applications that include evaluation of your systems, data collection, report generation, exception analysis and more.

Database Development & Deployment
Alarm & Event Data Management / Reporting
Trend & Historical Data Management / Reporting
Analytical Processing and Fault Detection
Custom Applications

Energy Intelligence

Energy costs have increased 56% globally since 2002, and power consumption is escalating dramatically, moving energy efficiency to the forefront as a prudent environmental and business practice. An intelligent strategy for managing data center energy usage will help to reduce greenhouse gas emissions as well as manufacturing and consumption costs.

O&M Engineering, Inc. stands at the leading edge in the design and development of real-time monitors and dashboards that enable facilities to evaluate and troubleshoot their energy usage and carbon footprint.

Security Intelligence

As we move forward, unprecedented security threats will continue to emerge. Facility operation and maintenance personnel must acknowledge their role in national security. At O&M Engineering, Inc., we represent and market advanced solutions designed to provide unmanned, actionable intelligence that can be easily integrated into your enterprise automation interface. We understand the historically closed and proprietary nature of the security and video surveillance industry so we have secured relationships with security solutions that are open and interoperable. Our solutions also integrate well and are supported on current infrastructure such as category 5 and fiber.
